

TOKHEIM HOMEBASE™

# Dedicated solutions for unmanned stations

Gaining visibility over unmanned stations from afar is paramount to the smooth running of your network. Tokheim Homebase™ centralises information from payment systems, dispensers, tank gauges, pole-signs and CCTV equipment, so that you can manage your stations remotely.

Seamlessly linked through a secure internet connection, Tokheim Homebase allows you to manage your site effectively and efficiently from anywhere, whether it's an office, coffee shop or while on the move.

## 1 Wetstock and Tank Management

Smart wetstock management capabilities help to reduce fuel losses and improve compliance. Tokheim Homebase comes with automatic tank calibration, wetstock reconciliation, leak detection and fully automated delivery detection features as standard, to help manage your fuel remotely.

---

## 2 Forecourt Control

Connect to all types of fuel dispensers with ease, through Tokheim Homebase's fully-integrated digital pump controller - it's the centre of your forecourt operations.

---

## 3 Accurate Reporting

The sophisticated reporting features of the Tokheim Homebase help to ensure you have the right amount of fuel in your tanks at all times, allowing you to manage your fuel stocks more effectively.

---

## 4 Reliable and Secure

With Tokheim Homebase, your service station can rely on a solution that is fast, stable and 'future-proof'. Our payment security solutions have been developed to meet the Payment Card Industry's (PCI) strictest requirements, so you're better protected from fraud, now and in the future.
