

TOKHEIM MOBILE PAYMENT™

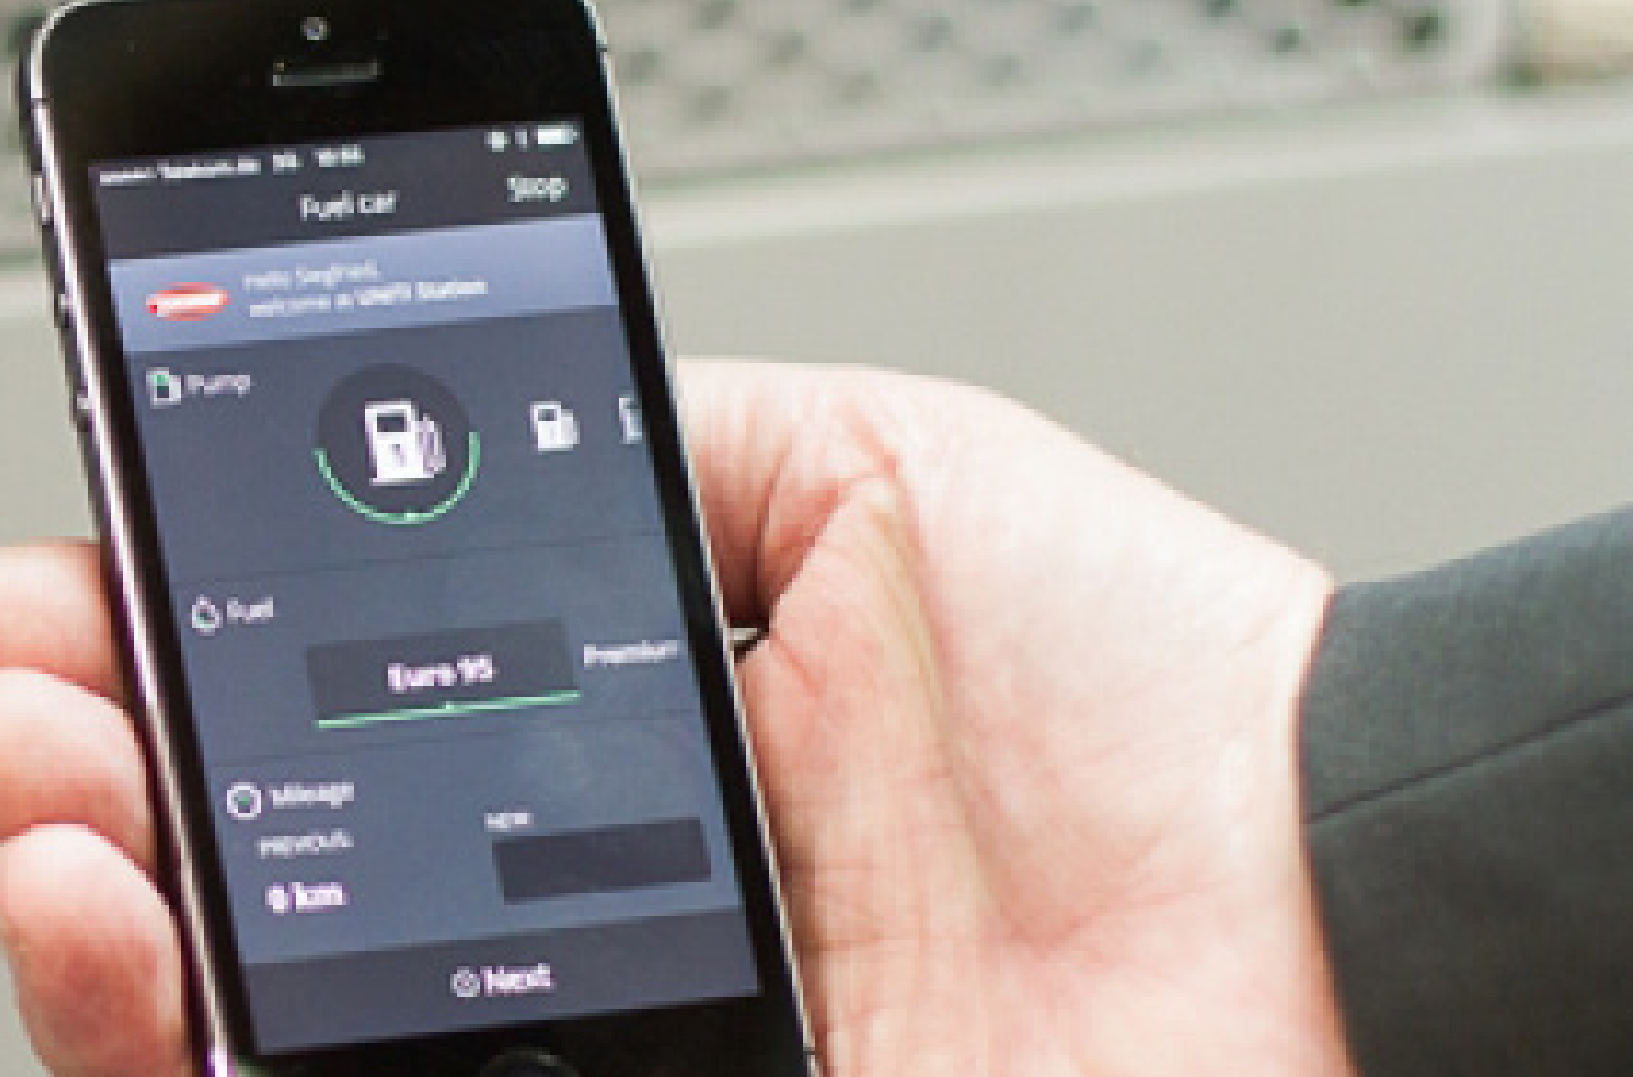

Quantil

Smarter, faster payment

Mobile technology has changed the way we look at our environment, and the fuel station is no exception to that. The Tokheim Mobile Payment solution provides your customers with a modern and flexible fueling app, opening up new ways to enhance customer interaction on your forecourt - so you're not limited to the traditional fuel cards or cash payments. Using the mobile app, customers are offered a quick and secure way to pay for their fuel purchase from the comfort of their vehicle, while adhering to fuel station health and safety regulations relating to mobile phone usage on forecourts. Users are also able to look back over historical purchases and retrieve receipts on demand.

1

Safe and Secure

With the Tokheim Mobile Payment solution, security and privacy is guaranteed, as no card numbers or sensitive personal data is stored on the smart phone app. The cloud-based mobile payment server, COMPASS, manages the entire process while interacting with Tokheim's leading Fuel POS point-of-sale system - Fuel POS - for forecourt activity and reporting. COMPASS also transmits the financial transactions to Tokheim OASE™ (Online Authorisation and Switching Environment), for further authorisation processing.

2

Seamless Integration

Tokheim Mobile Payment, through the Dover Fueling Solutions network, allows customers to interface with various site systems and with Tokheim OASE as a central payment service provider, to enable the authorisation of all mobile payment transactions.

3

Enriched Fuelling Experience

The beacon technology utilised by the Tokheim Mobile Payment solution enriches the fuelling experience even further. 'Beacons' will trigger a welcome notification to the smartphone when arriving at the fuel station, confirming the location of the dispenser to the mobile phone, simplifying the refuelling process and adding value to new and existing customer's on your forecourt.
